Open to Relocate - India

Summary

2x AWS Certified (Cloud Practitioner & AI Practitioner) junior AI/ML Engineer with a strong foundation in Python, machine learning, and data processing. Experienced in building end-to-end ML models, forecasting systems, and data-driven applications using libraries such as Pandas, NumPy, and Matplotlib. Possess academic background in Electronics and Communication Engineering with exposure to signal processing concepts. Skilled in developing scalable solutions, data analysis, and model evaluation, with hands-on project experience showcased on GitHub.

Skills

- Programming & Frameworks: Python, TensorFlow, PyTorch, Scikit-learn, Matplotlib, NumPy, pandas, OpenCV, keras.
- Cloud & Deployment: AWS (Certified Cloud Practitioner), REST APIs, Streamlit, CLI apps, GitHub workflows, Google Colab, VS Code, MATLAB, Overleaf, EC2
- Machine Learning & AI: Neural Networks, Generative AI, Probabilistic Models, LLMs, Forecasting (Prophet, ARIMA), Random Forest, Decision Tree, XGBoost, NLP, CNN, RNN.
- Computer Vision & Image Processing: AI-driven image reconstruction, content editing, and signal processing.
- Data Analysis: Feature engineering, data preprocessing, statistical analysis, visualization.
- Soft Skills: Problem-solving, adaptability, flexibility, pressure handling, collaboration, critical thinking.

Projects | [Link](#)

NLP Sentiment Analysis System

June 2026

- Implemented end-to-end NLP sentiment analysis system by transforming raw IMDB text-review files into a structured dataset of 50,000 labeled reviews for binary classification.
- Implemented NLP preprocessing techniques including HTML removal, tokenization, stopword removal, lemmatization, and TF-IDF vectorization.
- Trained and evaluated Logistic Regression and Multinomial Naive Bayes models for sentiment classification, with Logistic Regression achieving better overall performance.
- Deployed a Flask REST API endpoint for real-time sentiment prediction using serialized ML models with Joblib.
- Modularized preprocessing logic into reusable Python pipelines for scalable inference and deployment workflows.

Medical Cost Prediction API

May 2026

- Implemented a regression model to predict medical insurance costs using health and demographic data.
- Trained and compared models (Linear Regression, Random Forest regression) and selected the best performer.
- Deployed a **Flask REST API** on **AWS EC2** for real-time predictions.

Diabetes Classification API

April 2026

- Implemented a machine learning model to predict diabetes using patient health data
- Performed data preprocessing and EDA to identify key features affecting predictions
- Trained and evaluated models (**Logistic Regression, Random Forest**) and selected the best-performing model
- Built a REST API using Flask for real-time predictions
- Deployed the API on AWS EC2 and tested using Python scripts and Postman.

AI Expense Analyzer (CLI Application)

March 2026

- Provided insights through **CLI** and **REST API**, including AI-generated financial suggestions.
- Processed CSV data using Pandas and stored it in a structured SQLite database.
- Implemented SQL aggregation queries (GROUP BY) for category-wise and monthly spending analysis.
- Implemented a Python application to analyze expense data using SQLite and AI integration.

MNIST Digit Recognizer with Streamlit & Keras

June 2025

- Developed an end-to-end handwritten digit recognition system using TensorFlow/Keras, Scikit-learn, OpenCV, and Streamlit.
- Trained and evaluated RandomForest and Neural Network models, achieving up to 98.5% test accuracy.
- Built an interactive Streamlit app with real-time digit prediction and probability visualization.
- Deployed a lightweight ML application capable of low-latency inference and custom image testing.

Educations

M.Sc. (Artificial Intelligence)- Merit (2:1)

2023-2024

Sheffield Hallam University - Sheffield, United Kingdom

B.E(Electronics and Communication) - First Class Honors

2018-2022

Anna University- Chennai, India

Certifications

- AWS Certified AI Practitioner (AWS) [Link](#) November 2025
- AWS Certified Cloud Practitioner (AWS) [Link](#) August 2025
- Python for Data Science, AI & Development (IBM-Coursera) [Link](#) February 2025
- Signal Processing On-ramp (MATLAB Coding) [Link](#) March 2024
